Journal of Computational and Graphical Statistics

Dear Dr McCormick,

We have undertaken major revision on our manuscript titled, "Calendar-based graphics for visualizing people's daily schedules," based on reviewers' comments.

We have included a new subsection "2.4 Reasons to use calendar-based graphics" to explain why calendar displays are useful and when to use them, and a new section "3 Making calendar facets" to describe a new calendar faceting method `facet_calendar()`, that extends **ggplot2** intervals and complements the existing function `frame_calendar()`.

We have provided a detailed response letter to reviewers, as attached.

We believe that this manuscript has been significantly improved, that is a good fit for the Journal of Computational and Graphical Statistics.

Sincerely

Earo Wang
